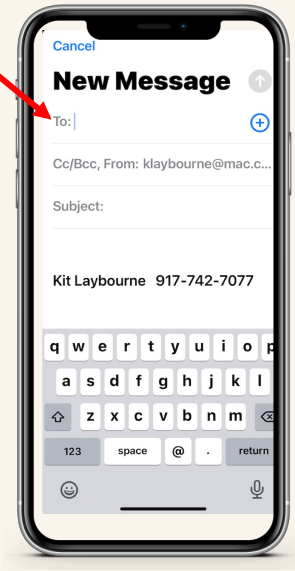
iQ Dictation

1 Dictation lets you speak to type. Apple's microphone icon sits directly below 'return' on the iPhone keyboard. See p2 to be sure you have turned Dictation on.

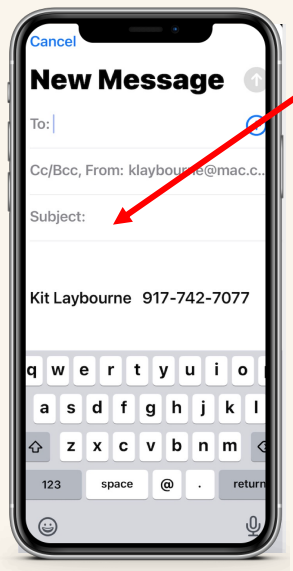
When you tap the dictation button, the iOS readies itself to transcribe your spoken word into printed text.

2 Open Mail.

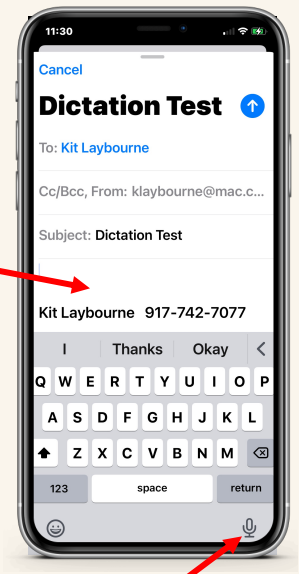
3 Type addressee



4 Type subject: (Dictation Test)

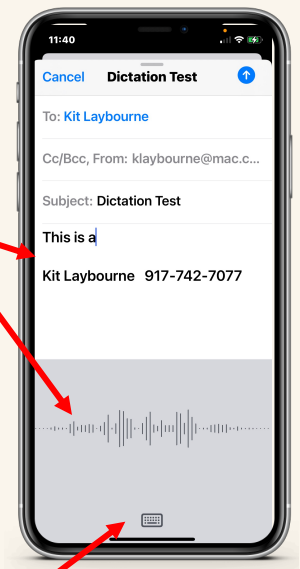


5 Place the cursor in the message space.



6 Press the microphone icon.

7 Record the message. The waveform appears as your word type as you speak them.



8 Press keyboard icon to end recording.

iQ Dictation

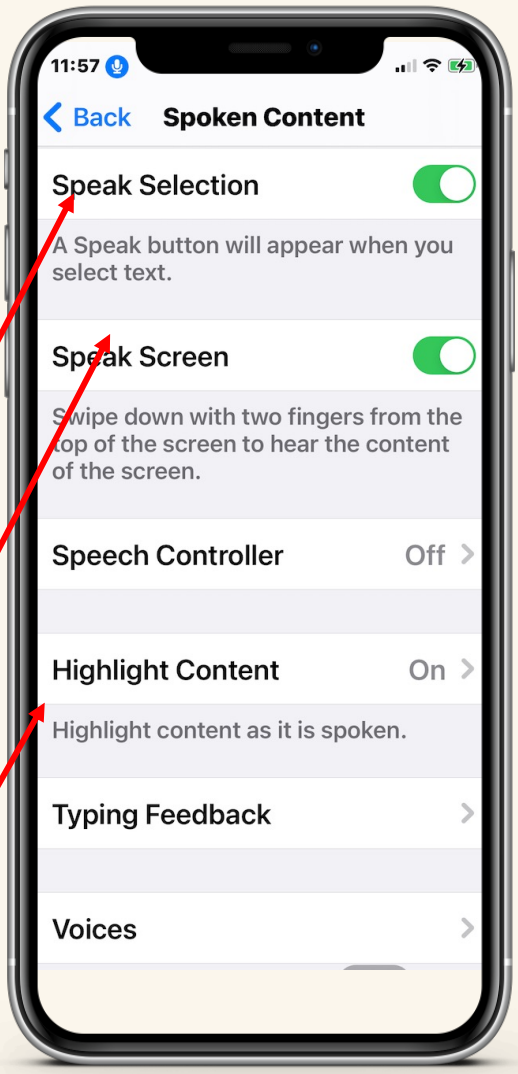
Dictation by **Voice Control** (as opposed to Dictation) lets you edit-by-voice.
A quotation from "iPhone Unlocked", by David Pogue, Simon & Schuster Paperbacks, New York, 2021

" Dictation lets you speak to type. Siri lets you speak commands. Now imagine that those two features fell in love and had a superbaby. Its name: Voice Control"



Any written text on your screen can be read aloud by your iPhone. To get this working….

1. Go to Settings> Accessibility > Spoken Content.
2. Turn on Speak Selection and/or Speak Screen

Speak Selection = a Speak button will appear when you select test.

Speak Screen – Swipe down with two fingers from the top of t3e screen to hear the current content of the screen.

Highlight Content = the screen highlights while the voice reads the corresponding text. A good way to help young readers.
